

HOW TO USE MEALVIEWER

online or on the app

Some tips for using Pigeon Catering's Interactive Menu Viewing Website

Create an account

Go to mealviewer.com or download the app from your app store. Press Log in as student/parent. Search for your school and create a profile.

By creating a profile as a parent, you can add multiple students. Students can be from different schools as long as the school is associated with Pigeon Catering.

Input Allergens

When creating an account, parents/students can input allergens.

Once an allergen is assigned to a student, every menu item that contains that allergen will be crossed off of the menu.

View Nutrition Info

When you hover over each menu item, the nutrition facts and a photo of the item will be displayed for the viewer.

The allergens for each food item will also be displayed this way.

Rate Meals

Meals can be rated two ways on the MealViewer app. Students can simply star a menu item to show that it is a favorite or they can rate the item from 0-100.

The cafeteria will be able to see this feedback in order to improve the menu and quality in the future

Build a Meal

On the left side of the menu calendar, there is a nutrition calculator.

The nutrition calculator is where students can choose menu items in order to calculate the nutrition facts for their entire meal, rather than just one menu item.

Cafeteria Payments

The left side of the menu calendar also contains a link to MySchoolBucks.

By pressing this link users will be able to make payments or check balances.
